The majority of the material consists of copies of publications related to the scientists' research and activities, many of which were written or annotated by them, such as reprints of journal articles, draft scientific reports, government publications, and newspaper clippings. Original scientific research records comprise raw data, field notes, memoranda, and draft reports. Includes correspondence regarding the Nechako River court action between DFO, Alcan, and the province and scientific reports that were created in anticipation of the case. Also includes significant material emanating from the British Columbia Utilities Commission Kemano Completion Project Public Review, such as correspondence, BCUC newsletters and news releases, exhibits and evidence submitted to the review panel, documents produced for the hearings, and final reports. In addition, includes records and publications relating to various other groups affected by the Kemano Completion Project or arising because of it, such as the Cheslatta Carrier Nation, the Rivers Defense Coalition, the Nechako Fisheries Conservation Program, the Nechako Watershed Council, the Nechako Environmental Enhancement Fund, and the Nechako River Alliance.

Arrangement: Arranged by the archivist. Each creator's collection of records is maintained separately, arranged in a series for each scientist. Each series is arranged roughly chronologically. Shirvell's series (2003.4.4) is split into six subseries.

Dr. Don Alderdice Series

Creator: Dr. Donald F. Alderdice

Biographical Sketch: Dr. Don Alderdice (1924-March 19, 2010) was a respected fisheries biologist. He completed a B.A. (Honours in Zoology) from UBC in 1946, a M.A. (Zoology, Biology and Botany) from UBC in 1948, and a Ph.D. in environmental factors, experimental biology and biochemistry from the University of Toronto in 1963. Alderdice began working with the Fisheries Research Board of Canada (FRB) in 1944 as a field worker and joined the Department of Fisheries and Oceans in 1949, where he stayed until his retirement in 1987. His research during his tenure as a DFO biologist included salmon ecology studies, study of the influence of power dams on migration of salmon in British Columbia, and the physiological ecology of biological problems in B.C. fishes resulting from environmental alteration. Between 1985 and 1987, his research focused on the examination of the Alcan-Nechako problem, particularly the effects of environmental modification and its effects on salmon of the Nechako system. Much of this study emphasized the effects of the elevated total dissolved gas pressure (TGP) on the salmon. After Alderdice's retirement from DFO in 1987, he continued to work as a biological consultant on fisheries issues.

Dates of Creation: 1980-1997

Physical Description: 0.6 m of textual records (2 boxes)

Scope and Content: Series consists of Alderdice's records and collected material related to the Kemano Completion Project and his activities as a fisheries biologist. Early material includes research records on total gas pressure and flow analysis research, particularly in regards to the Nechako River, which Alderdice was working on in anticipation of the Nechako River court action. Records regarding the Nechako River court action range from 1984 to 1987, and include correspondence, internal DFO memoranda, and legal documents. Records created by Alderdice after his retirement from DFO in 1987 document his involvement with the British Columbia Utilities Commission Kemano Completion Project Public Review and his connection to the Siddon v. Mair court case. Also includes copies of publications related to Alderdice's research and activities, such as reprints of journal articles, scientific reports, government publications, and newspaper clippings.

Dr. Cole Shirvell Series

Creator: Dr. Cole S. Shirvell

Biographical Sketch: Dr. Cole Shirvell (1948-) was born in Edmonton, Alberta. He completed a B.Sc. at the University of Alberta in 1970 and a Ph.D. from the University of Otago in 1980. Shirvell started work with the Department of Fisheries and Oceans as an NSERC Post-Doctoral Fellow in 1980 and became a DFO research scientist in 1983. Throughout his career, Shirvell's research has focused on the effects of streamflow reduction on habitat, particularly in regards to trout and salmon.

Dates of Creation: 1974-2000

Physical Description: 3.6 m of textual records and other material (11 boxes)

Scope and Content: Series consists of Shirvell's records and collected material related to his activities as a research scientist, particularly his involvement in the Kemano Completion Project. Shirvell's records are arranged into six subseries:

- literature review, consisting of published material;
- research and publications, consisting of Shirvell's publications and research material;
- Envirocon and Alcan, consisting of Envirocon and Alcan publications and records;
- Nechako River court action, consisting of records related to the DFO-Alcan court case;
- Nechako Fisheries Conservation Program, consisting of material relating to NFCP; and,
- BCUC Kemano Completion Project Review, consisting of records relating to Shirvell's participation in the public review.

The majority of the material in all subseries consists of copies of publications related to Shirvell's activities and research, many of which were written or annotated by him, such as reprints of journal articles, draft scientific reports, government publications, and newspaper clippings. Shirvell's research records comprise raw data, field notes, memoranda, and draft reports, many of which relate to his 1986 Nechako River salmon overwintering studies. Records regarding the Nechako River court action range from 1980 to 1987, and include correspondence, internal DFO memoranda, legal documents, and related scientific reports. Also includes significant material emanating from the British Columbia Utilities Commission Kemano Completion Project Public Review, such as correspondence, BCUC newsletters and news releases, exhibits and evidence submitted to the review panel, documents produced for the hearings, and the final report.

Arrangement: Arranged by the archivist into subseries based on Shirvell's activities and record types. Records in each subseries are arranged chronologically.
